

Hello, my name is Grace. I'm from South Africa. And what _____ (industrial / industry) will AI put out of _____ (business / businesses)?

I don't know. I don't think _____ (anyhow / anyone) knows enough to definitively say that AI will put a _____ (special / specific) industry out of business. It's a bit like saying AI will put sort of paper-based _____ (medium / media) out of business, even though if _____ (anywhere / anything) happens to paper-based media, that'll be because of the times _____ (changed / changing), not because of artificial intelligence, but just technology as a _____ (hole / whole). And it's a bit like saying, you know, the telephone _____ (industries / industry) has been put out of business, and it's _____ (now / not). Even though you used to have _____ (operators / operations) who would reroute calls and those jobs became _____ (obese / obsolete), the technology changed, but the _____ (sample / simple) fact of contacting people and needing to be in _____ (contact / construct) with other people _____ (remainder / remained).

And I think at the _____ (heart / heat) of it, some of the needs that _____ (industries / industry) have seen to and taken care of will _____ (stall / still) be there. So, in some _____ (from / form), the industry will exist, but there will be lots of _____ (change / changes) because of AI, at _____ (least / last).
