Hello, my name is Preah. My question ____ (was / what), do you think AI or robots ____ (will / want) be more harmful or helpful ____ (at / in) the future?

I am ____ (honestly / honest) not sure where I stand with ____ (this / them), so maybe you can help me ____ (about / out). I'm going to use a ____ (scenario / scene) to best explain how I feel ____ (for / about) it. Let's talk about ____ (mobility / mobile) and in the home. Let's say I'm a ____ (physical / physically) fit person and I have a ____ (robots / robot) that is able to cook, clean, wash, tidy ____ (at / up), do everything for ____ (my / me). All I need to do is just sit ____ (down / over), press a button or just say ____ (which / what) I want it to do. I feel like if that will ____ (made / make) people more lazier, less ____ (inclined / incline) to be physically ____ (active / actively). And I think we will just be very ____ (dependence / dependent) on robots to do ____ (everything / every thing) for us. So I would say that is ____ (where / wear) the harm would come in in that aspect.

But let's think about ____ (them / the) good or helpful. Let's talk about a ____ (person / personal) who isn't physically ____ (capable / capacity) of doing things on their own or a ____ (personal / person) that is disabled. That would save them from ____ (hating / having) to hire a real life person to do these ____ (things / thinks) for them if they had a robot ____ (to / go) do it for them. But when you also ____ (thank / think) about the percentage of people who are ____ (physically / physical) incapable to the ____ (percentage / percent) of people that aren't physically ____ (incapacity / incapable) and can do things ____ (on / in) their own, it would mean that it ____ (will / would) be more harmful, wouldn't it?
